The No.1 Specialist in ***Energy Saving***

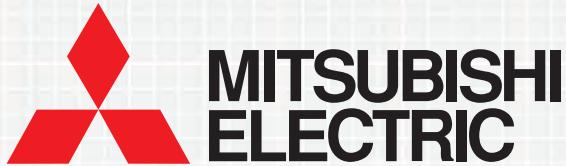

At the leading-edge of air conditioning technology

EXCELLENT Energy Savings

A blue circular graphic containing the text "EASY To Clean!" in large, bold, black letters. Below it, the words "Easily accessible" and "Inner vent" are written in a smaller, italicized font.

QUIETEST 19dB

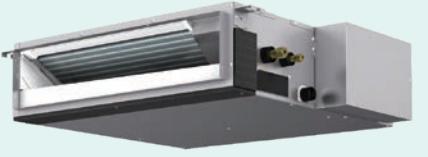

Your Life, Our Technology – The Comfort Connection.

As everyone knows, nothing compares to the comfort that nature has to provide. Thanks to the many technical refinements, Mitsubishi Electric's air conditioner bring you closer to this ideal. Improved EER (Energy Efficiency Ratio) levels significantly reduce energy consumption while extremely quiet operation and the use of the Eco-friendly R32 refrigerant allow our series to create a naturally serene environment in every room of the house.

Cleaning-Free, Pipe Reuse Technology

Mitsubishi Electric's Cleaning-Free Technology

Chloride residue builds up in existing pipes and becomes a source of trouble. In addition, the iron particles and slime produced as a result of compressor failure lead to problems. To counter this, various original Mitsubishi Electric technologies have been combined to enable the introduction of "cleaning-free pipe reuse."

Advantages of Mitsubishi Electric's Cleaning-Free Technology

SHORT WORKING PERIOD

- Cut in extensive works behind walls or above ceilings to install new piping.
- Cut in difficult tasks including welding works above the ceiling.

COST-SAVING

- Cut in material costs to install the new piping.
- Great reduction in waste materials minimizes their disposal costs.
- Short period of work saves the installation costs.

ECOLOGY

- Waste materials, such as ceiling materials and pipes, minimized.
- Being environmentally aware by 'reusing' meets the demand of the times.

Cautions when using existing piping

- When removing an old air conditioning unit, please make sure to perform the pump-down process and recover the refrigerant and refrigerant oil.
- Check to ensure that the piping diameter and thickness match Mitsubishi Electric specifications.
- Check to ensure that the flare is compatible with R32-R410A. (The copper pipe flare-end shape and dimensions used for R410A can also be used for R32 air conditioners.)
- Refer to full replacement catalogue for more details.

EASY CLEAN

THE WIDE AIR OUTLET MAKES CLEANING EASY,
ALWAYS KEEPING THE AIR IN YOUR ROOM
CLEAN AND FRESH.

EASY CLEAN's unique cleaning system

Open the blower outlet for cleaning

The entire front panel can be washed

Easy removal

Scrub clean

Thorough cleaning keeps your home healthier and more comfortable.

Eliminates odours

Always bringing you fresh air

Prevents mould

The mould guard (internal drier) always keeps the inside unit clean

Longer lasting high performance

Consistent performance from time of purchase

Economical energy costs

Cleaning the fan (25%), the heat exchanger (5%) and the filter (15%) increases energy savings by a total of up to 45%!

Dual Barrier Coating

A two barrier coating prevents dust and greasy dirt from sticking onto the air conditioner.

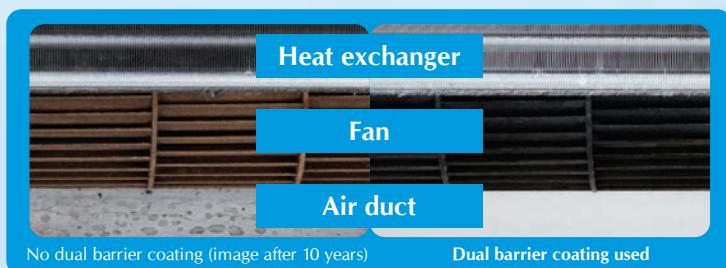

State-of-the-art coating technology

Dirt is generally classified into two groups: hydrophilic dirt such as fiber dust and sand dust, and hydrophobic dirt such as oil and cigarette smoke. Mitsubishi Electric's dual barrier coating works as a two barrier coating with blended "fluorine particles" that prevent hydrophilic dirt penetration and "hydrophobic particles" that prevent hydrophobic dirt from getting into the air conditioner. This dual coating on the inner surface keeps the air conditioner clean year-round and improves energy efficiency while delivering comfortable clean air.

■ Comparison of dirt on heat exchanger, fan and air duct (in-house comparison)

The inside of the indoor unit gets dirty after many years of usage.

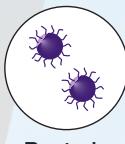

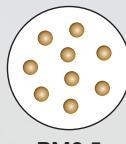

Consequences when the inside of the indoor unit is left dirty.

- Deterioration in energy efficiency
- Musty smell from the unit

Minute Particles Floating in the Air

PM2.5

Bacteria

House dust

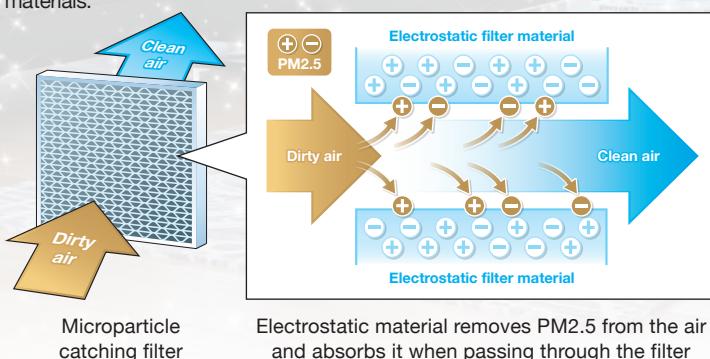

Model:
FP & GP
Series

Filter:
Microparticle
catching filter

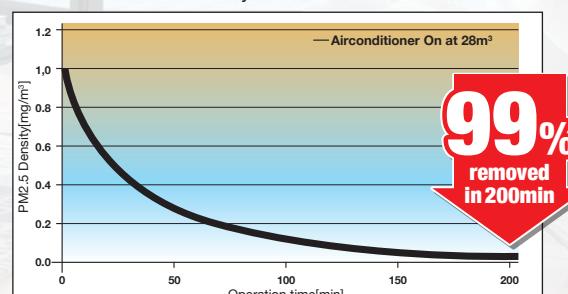

Microparticle catching filter effectively eliminates PM2.5

Effectively catches floating PM2.5 particles to maintain clean air in the room.

Electrostatic filter even effectively removes and eliminates minuscule particulate materials.

■ PM2.5 removal efficiency

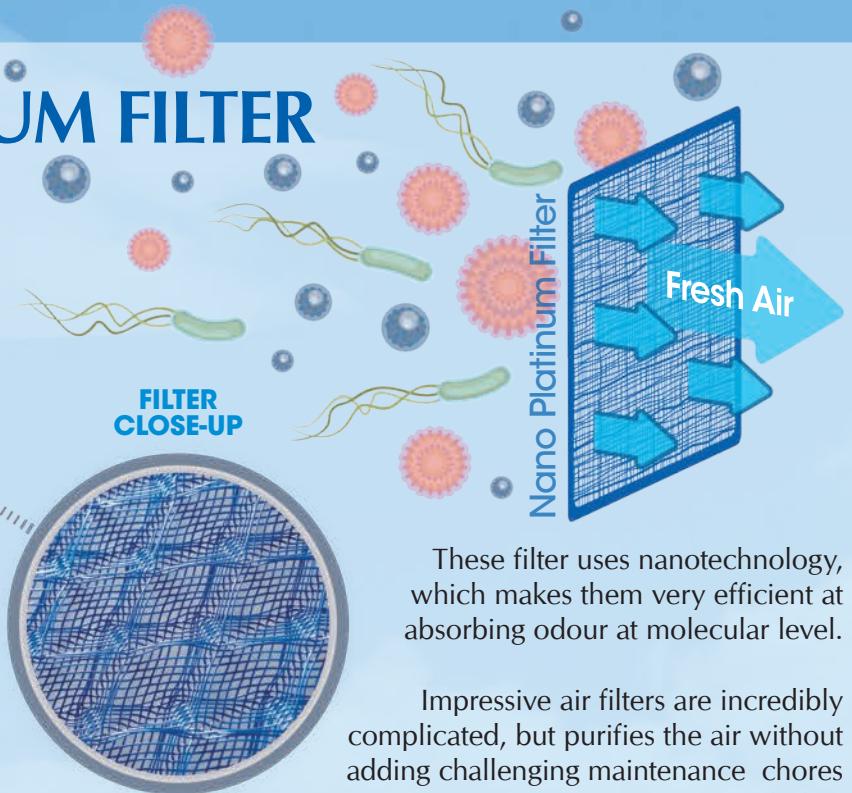

Test conditions: Removal efficiency of particulates sizes ranging 0.3-2.5 μ m after operation for 200min using FN20 microparticle catching filter in 28m³ enclosed space with tidal air circulation volume of 0.5/hr (in-house test)

NANO PLATINUM FILTER

NANO PLATINUM FILTER

For an air filtration system to be practical, it has to be simple to maintain and consistently deliver clean, fresh and healthy air. Nano platinum filter can protect your family from pollutant and allergens without extra effort or maintenance.

These filters use nanotechnology, which makes them very efficient at absorbing odour at molecular level.

Impressive air filters are incredibly complicated, but purifies the air without adding challenging maintenance chores in your to-do list.

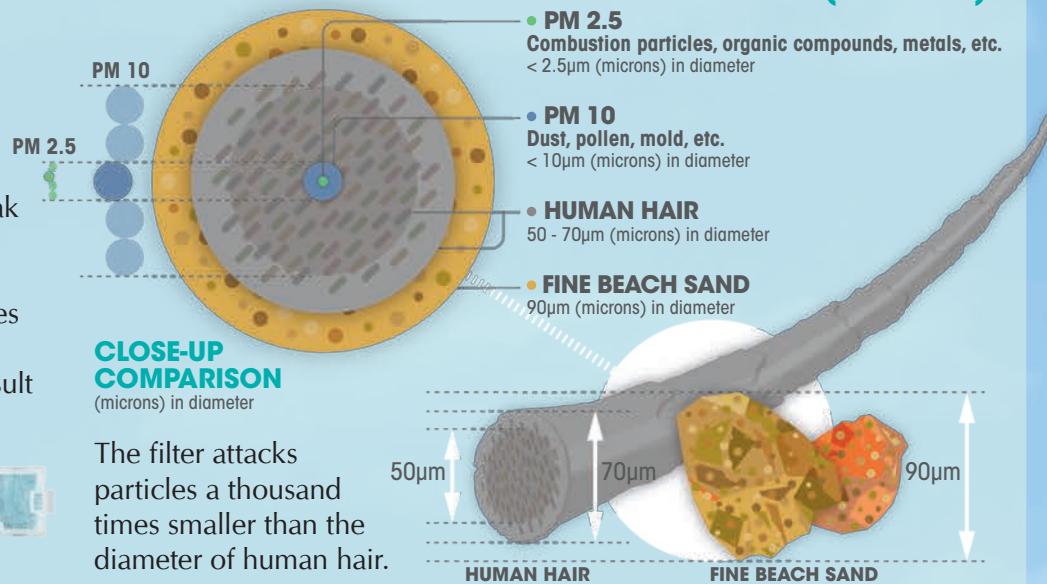

The filter catches dead mites and their droppings, pollen and other allergens on the filter filament, then decompose them with artificial enzymes. This break down allergen proteins into non allergen proteins. The complicated process involves destruction of undesirable proteins S-S bonds. The result is healthier, purer air.

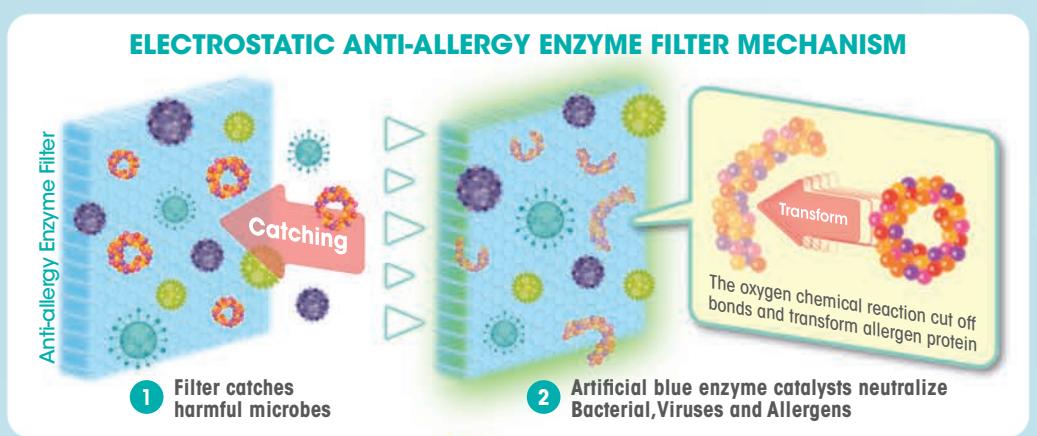

ANTI-ALLERGY ENZYME FILTER

ANTI-ALLERGY ENZYME FILTER (OPTIONAL)

The filter attacks particles a thousand times smaller than the diameter of human hair.

Neutralizes
99.9%

HOURS

Easy, Clean & Comfortable

Easy Clean Design

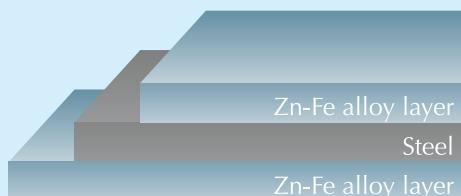

The easily detachable panel is a snap to wash and the airflow vents can be opened without any special tools for quick cleaning of the inside of the air conditioner. It is recommended that the air conditioner be cleaned regularly as this will increase both operating efficiency and energy savings. Always clean the heat exchanger, fan and air vent to ensure proper performance and economical operations.

Anti-Rust Treatment (Blue Fin)

Each cabinet of the outdoor unit has been applied with a special anti-rust treatment.

Outdoor Cabinet

Auto Mode

We offer you an easy way to comfort with auto mode. "Auto Vane" is created to set the vane angle automatically. "Auto Fan" is created to adjust airflow speed automatically. These allow ideal temperature to be achieved in the shortest time.

LCD Remote Controller

From temperature and operation modes to air volume and direction, you will be able to customize your environment at the touch of the button. Large and easy to identify buttons allow easy access to frequent used functions. The LCD display allows you to check temperature and operating condition at a glance with an easy slide cover that prevents inadvertent operations of preset controls and other functions.

Fuzzy Logic "I Feel"

Is the room too hot, too cold, too dry or too humid? On auto mode selection, the fuzzy logic control system adjusts condition to suit you. Your selected temperature setting will be stored in the memory system and generate automatically every time you operate the aircon.

Mitsubishi Electric's Main Technology

Inverter Technology

DC Inverter

The Quiet Air Conditioner in the Market

A high efficiency DC motor drives the fan of the outdoor unit. It offers up to 60% greater efficiency than an equivalent motor.

Joint Wrap DC Motor

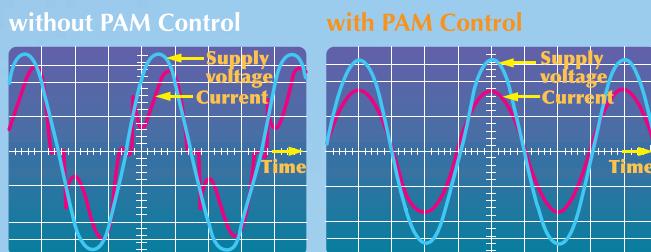

Mitsubishi Electric's unique Joint Wrap Motor is environmentally friendly, using less copper wiring than conventional motors through the employment of joint wrap production techniques. This concentrated winding DC motor features our original high density, concentrated winding technique and a reliable, high efficient motor.

PAM Control

Pulse Amplitude Modulation

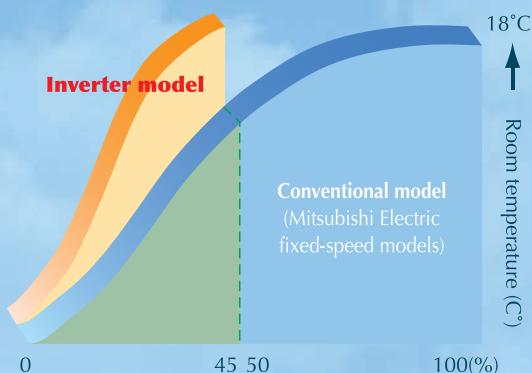

Electricity can be used efficiently with less loss, the current wave resembles the supply voltage wave. PAM is a method for controlling the form of waves so that it conforms to the supply voltage waves. With PAM, 98% of input power supply is effectively used.

PAM adjusts the form of current wave so that it is close to that of the supply voltage wave. High harmonics is reduced and 98% of the electricity is utilized.

Higher Speed Cooling

Our advanced inverter technology enables efficient high-speed cooling by precisely and flexibly controlling the rotation of the compressor according to individual cooling needs. Example, during summer months, the compressor speed is automatically set at a maximum level of 30% faster than non inverter models. Thus, the room takes lesser time to cool.

Optimum Comfort Year-Round

To ensure that a room is never too cold or too hot, inverter technology allows the air conditioner to detect subtle fluctuations in room temperature and adjust automatically. Unlike conventional air conditioning units that must start or stop repetitively, inverter units offer finely tuned operation - such as the accurate control of compressor rotation - for a more comforting airflow and far less temperature variations.

Using a Motorcycle as an Example

Power increased
Efficient increase of voltage for increased power

Significant energy savings
Electricity loss reduced for surprising energy savings

Energy savings is limited
Fuel is wasted

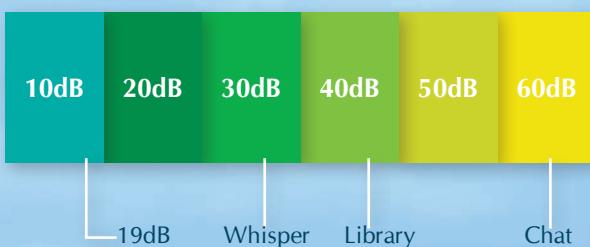

Power is limited
Power is insufficient for steep hills

*This diagram illustrates the merits of PAM Control.

Silent Operation & Energy Saving Technology

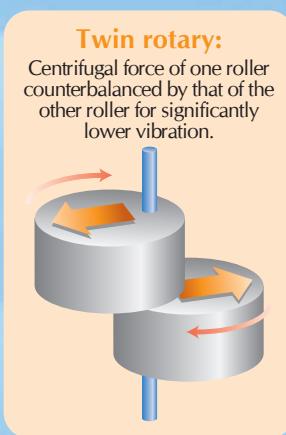

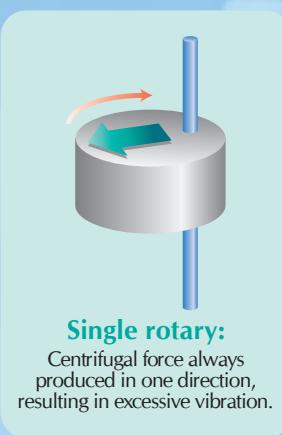

Only
19dB

The Quiet Air Conditioner in the Market

Noise level for silent mode operation is only at 19dB for MSY-GP10VF and MSXY-FP10,13VG making them one of the quiet units in the market. The multi-angled heat exchanger has a modified fin shape that reduces air resistance for a smoother, quieter airflow. The wide fan diameter produces great airflow at lower fan speeds and the uneven pitch between each fan blade helps to eliminate noise.

Twin Rotary Compressor ensure Peace and Quiet

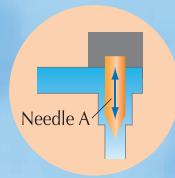

Unlike conventional models with single rotary, all Inverter Multi Split System outdoor units feature a twin rotary compressor that provides balanced rotation as the centrifugal force of one roller is counterbalanced by the other. This significantly reduces both vibration and noise. This is why Mitsubishi Electric's outdoor units are so peacefully quiet.

NEW
LEV

New LEV Control

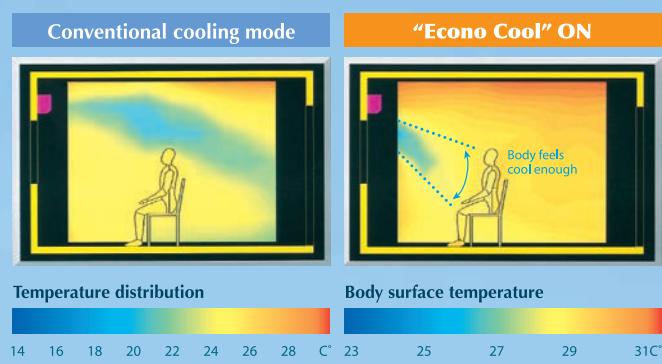

Linear Expansion Valve automatically adjusts the volume of refrigerant flowing through the air conditioner according to air conditioning load. When the load is low, Needle A drops, restricting the flow path and decreasing the volume of refrigerant. Circulation is then optimized to facilitate more economical operation.

Econo Cool

Econo Cool – Smart Save

The Econo Cool, one touch operation automatically adjust the direction of the airflow based on the temperature at the air outlet. The set temperature can therefore be 2°C above conventional temperature setting without loss of comfort and with 20% increase in energy efficiency.

	Conventional	Econo Cool
Ambient temperature	35°C	35°C
Set temperature	25°C	27°C
Perceived temperature	30°C	29.3°C

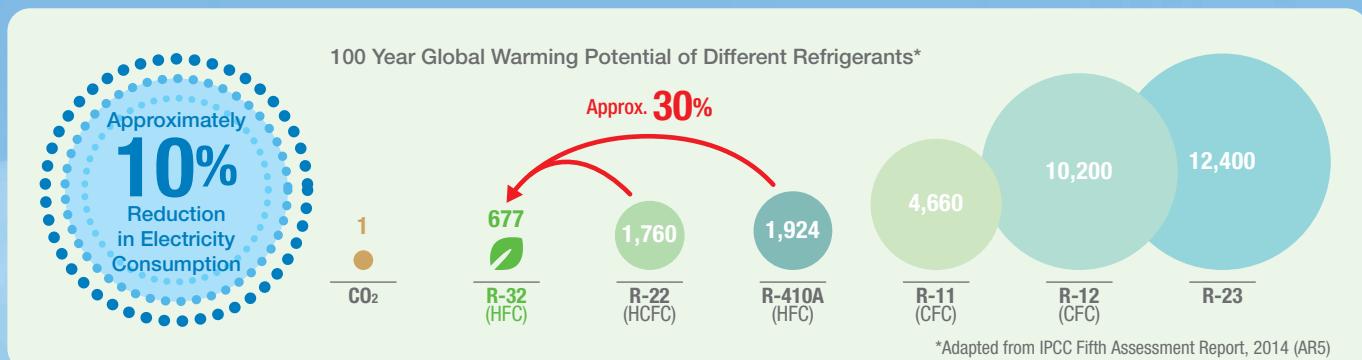

Benefits of R32 Gas

A new genesis gas lowering green house effect

Low in GWP Value

Refrigerant has been a debatable topic as a contribution factor that harm the ozone layer. R32 gas - an environmentally friendly and energy efficient refrigerant offers a new alternative. Having a low GWP value of only 677, its 1/3 of the GWP value that R410A carries, lowering carbon emission by 30%.

Requires Less Refrigerant Volume

The lower density characteristic of R32 air conditioning systems require 15-20% less refrigerant than R410A equivalents, making them more efficient. This means, lower carbon emission and lower energy cost with the same performance.

Single Component of Gas

R32 is a single compound, CH₂F₂ unlike R410A which is a mixture of difluoromethane and pentafluoroethane. Being a single component gas, R32 gas is more convenient to R410A gas. This will result in a smaller footprint, despite using compressors with the same capacity.

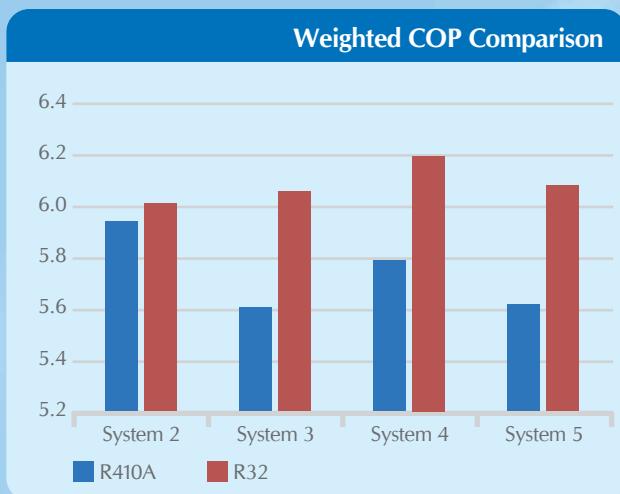

System 5- R410A
MXY-5G48VA2
Dimension (W x D x H)
950 x 330 x 1048mm

System 5- R32
MXY-5H48VG
Dimension (W x D x H)
950 x 330 x 796mm

Higher Efficiency

R32 gas has a higher cooling capacity due to its higher critical temperature of 78.11°C. This results in higher efficiency and higher COP in the R32 gas system. In return, it approximately saves 10% of the electricity bill when compared to using R410A gas.

FEATURES

Energy Saving

 DC Inverter	 Temperature Range Restriction
 PAM Control	 New LEV Control
 Econo Cool	

Comfort

 Only 19dB	The Quiet Air-Conditioner In The Market
 Computerised Dehumidification	Eliminate dampness for healthier and more comfortable air-conditioning, while enjoying great year-round economy.
 5 Step Vane Control & Swing Mode	Five different airflow patterns & "Swing" mode match the interior layout and people in the room.
 Quiet Operation	 Powerful Cool
 Auto Mode	 Fuzzy Logic "I Feel"
 Wide Control	 Long Air-flow

Installation & Maintenance

 EASYCLEAN	Easy Clean Design
 Durable Electronic Metal Housing Box	This special box protects the electronic circuitry from dust ensuring its reliable operation and preventing fire in the event of a short circuit.
 Anti-Rust Treatment	
 Emergency Circuit Protection	In the event of a sudden power surge, e.g. lighting, the circuits of 3 safety barriers (fuse, baristor, and surge absorber) are automatically broken first to protect the printed circuit board (PCB).
 Self-Diagnostic Function	In the unlikely event of a malfunction, the LED on the indoor unit flashes to indicate the exact spot to be checked.

Guaranteed Operating Range:

FP Series

Introducing a compact and stylist indoor unit with amazing quiet performance. Having advantage of neat installations in small bedrooms made possible, and increase in energy-savings by selecting the optimal capacity required for each room.

Low Standby Power

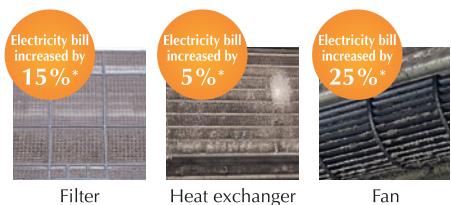

Electrical devices consume standby power even when they are not in actual use. While we obviously strive to reduce power consumption during actual use, reducing this wasted power that cannot be seen is also very important.

EASY Clean Design

The easily detachable panel is a snap to wash and the airflow vents can be opened without any special tools for quick cleaning of the inside of the air conditioner. It is recommended that the air conditioner be cleaned regularly as this will increase both operating efficiency and energy-savings. Always clean the heat exchanger, fan and air vent to ensure proper performance and economical operation. It reduces your electricity bill by approx. 45%*.

*Electricity bill comparison of operation under fixed temperature with 8 grams of soil on the fan and one without. Based on internal company data. **Cleaning of filter and heat exchanger is possible by removing the panel.

Dual Barrier Coating

Dual Barrier Coating prevents dust and greasy dirt from sticking onto the coated air conditioner. Dirt is generally classified into two groups: hydrophilic dirt such as fiber dust and sand dust, and hydrophobic dirt such as oil and cigarette smoke. Mitsubishi Electric's unique dual barrier coating prevents both hydrophilic and hydrophobic dirt from sticking onto the air conditioner. This dual coating on the inner surface keeps the air conditioner clean all year round and improves energy efficiency while delivering comfortable clean air.

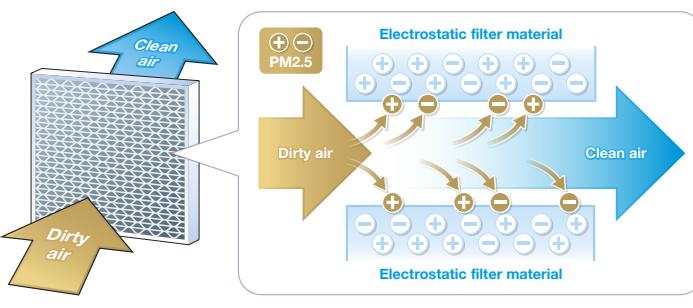

PM 2.5

Microparticles Catching Filter

Filter effectively eliminates PM2.5 particles to maintain clean air in the room. Removal efficiency of particulates sizes ranging 0.3-2.5 μm after operation for 200min using MSXY-FN20VE microparticle entrapment filter in 28m³ enclosed space with tidal air circulation volume of 0.5/hr (in-house test).

Effectively catches floating PM2.5 particles to maintain clean air in the room.

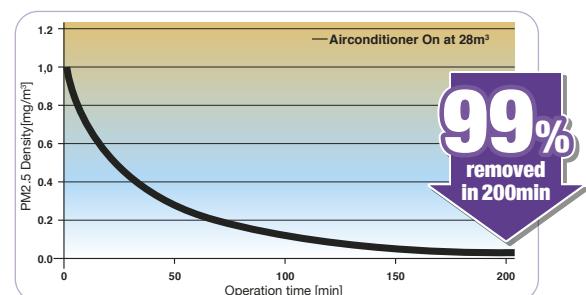

- Electrostatic filter even effectively removes and eliminates minuscule particulate materials.

Microparticle catching filter

Electrostatic material removes PM2.5 from the air and absorbs it when passing through the filter

- PM2.5 removal efficiency

Test conditions: Removal efficiency of particulates sizes ranging 0.3-2.5 μm after operation for 200min using FN20 microparticle catching filter in 28m³ enclosed space with tidal air circulation volume of 0.5/hr (in-house test)

PEY Series

This concealed ceiling-mounted indoor unit series is compact, and fits easily into bedrooms lowered ceilings. Highly reliable energy savings performance makes it a best match choice for concealed unit installations.

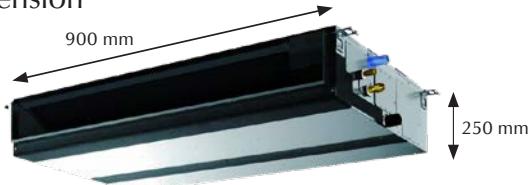

Compact Ceiling Concealed Style

With our "ceiling concealed model", the air-conditioner unit itself is enclosed in the ceiling cavity, leaving only the outlet and inlet grille mounted on the ceiling surface. This greatly helps the air conditioning system to keep the quality of your interior decor.

Unit size has also been made more compact, slashing installation space and also facilitating concealed use in buildings where exposed format units have been the rule in the past.

Dimension

PEY-M50/60JAL

PEY-M50/60/71JAL

Wider Selection of Fan Speed and Static Pressure Level

Three fan speeds (Low-Mid-High) and five static pressure levels (35-50-70-100-125Pa) are available by using the DC fan motor to meet various application needs.

Indoor		PEY-M50JAL	PEY-M60JAL	PEY-M71JAL
Rated Capacity (Min-Max)**	kW	5.0 (1.5-5.8)	6.0 (1.6-6.7)	7.1 (1.7-8.5)
Power Input	kW	0.11	0.17	
Max Running Current	A	1.39	1.97	
Airflow Rate (Lo-Mid-High)	CMM (m³/min)	12.0-14.5-17.0	17.5-21.0-25.0	
Sound Level (Lo-Mid-High)*	dB(A)	30-35-39	30-34-39	
Dimension (W X D X H)	mm	900 X 732 X 250	1100 X 732 X 250	
Net Weight	kg	27.0	30.5	
External Piping	Diameter	Gas (ø) mm	12.70	15.88
		Liquid (ø) mm	6.35	9.52
Static Pressure		35-50-70-100-125		

*Note: sound level is measure in anechoic chambers (based on 50Pa)
Total indoor running current must not exceed 3 Amps when connecting PEY-M indoor units with MXY-H series

**Varies according to connected CU model

SEZ Series

Compact type fits neatly into lowered ceiling, achieving stringent economy in all aspects of air conditioning.

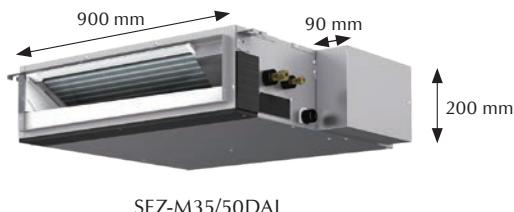

Compact Ceiling Concealed Units

Only the intake-air grille and outlet vents are visible when using this ceiling concealed indoor unit. The rest of the unit is conveniently hidden in the ceiling cavity, essentially leaving the ceiling and walls free of bulky looking devices and maintaining a high-class interior décor.

The compact units require minimal space and can be installed in buildings with lowered ceilings, where exposed units were the rule in the past.

Dimension

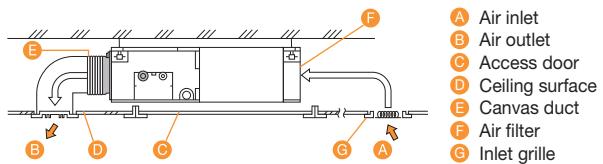

Wide Selection of Fan Speed and Static Pressure Level

Three fan speeds (Low - Med - Hi) and four static pressure levels (5 - 15 - 35 - 50Pa) are available by using the DC fan motor to meet various needs.

SEZ-M35/50/71 DAL

Drain Pump (Optional)

The PAC-KE07DM-E drain pump is now available as an option. With the pump, a drain hose length of up to 550mm can be used, leading to increased installation possibilities.
